**Annual
Conference
2020**

VIRTUAL EVENT | 30 NOVEMBER - 3 DECEMBER 2020

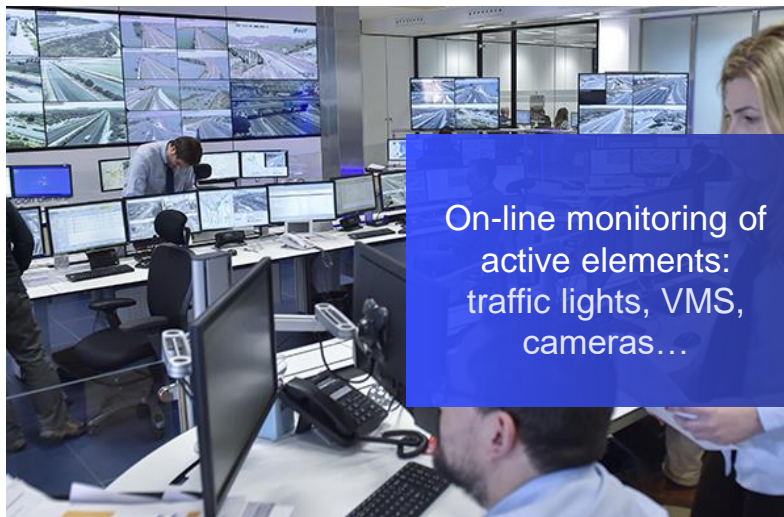

AI and IoT solutions for automated road inspections: traffic signs and road surface

Traffic management

Monitoring for incident detection

On-line monitoring of active elements: traffic lights, VMS, cameras...

Visual inspection of passive elements: traffic signs, road surface

Monitoring passive elements

Infrastructure inspection and maintenance.

Visual inspections

Not automated.
No evidence.

Maintenance costs

Local/regional Authority's responsibility

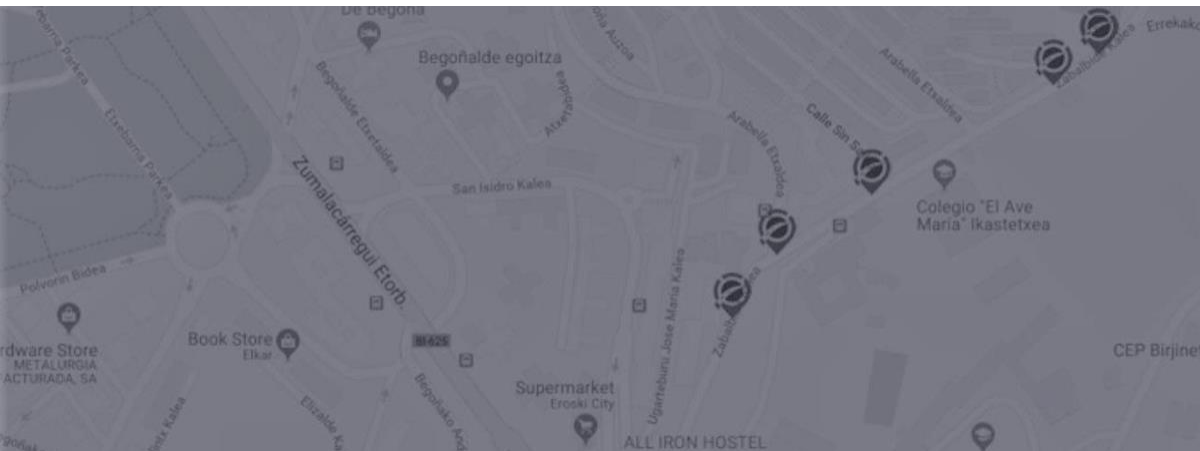

Limited budgets

#SmartRoad #AI #IoT #Sensors

ASIMOB's solution.

Automated risk detection

We generate and analyse data that saves lives

100% in-house developed SW

IoT

Road data collection, geolocation and communication.

Machine Learning

Characterización of irregularities in the road surface

Computer Vision

Deep Learning AI to detect incidents in traffic signs.

Process for automating traffic signs and road surface monitoring

Deployment and processing

Easy deployment
in fleet vehicles

Dash-cam
Android device
OBD

AI processing
in the Cloud

Computer Vision: detection
and classification of traffic
signs.

ML: Detection and
classification of irregularities
in the road surface.

Inventories and maintenance Traffic signs

Elaborating and updating a traffic sign inventory is a labour-intensive task.

So, it is done once every several years.

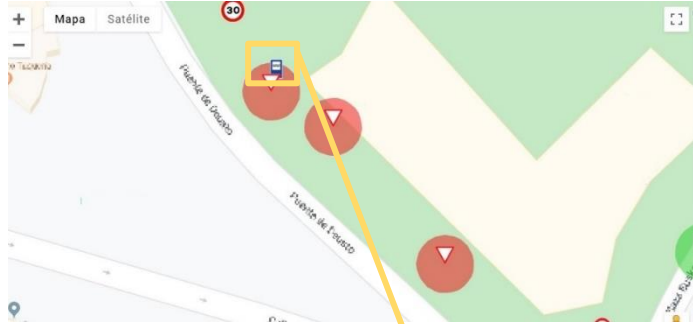

And what happens in-between these updates? How are temporary signs controlled?

> 5% Traffic signs are not managed because of errors in inventories

Traffic signs

Updating inventories

Traffic signs

Detecting signs that are not visible

Traffic signs

Supervising minor damages

Stickers or dirt

Bent or minor damage

Partially occluded

Location and video footage of the sign

Traffic signs – Road work signage

Verifying Road Work signage

Traffic signs - Road works signage

Signage inconsistency

Traffic signs

Ensuring good visibility

Road surface irregularities

Detection and evaluation

New technologies for road O&M

Automation for road/street maintenance

Automated inspections are more **effective**

Sistematic checks, generation
of digital evidence..

Integration of maintenance process in other systems

SmartCity platforms, TMC,
SCADA...

Early detection of risks and degradation

Related to road infrastructure.

Digital transformation of road M&O

Automated process to manage
traffic signs and road surface.

Thank you

Committed to the SDO
